

Water Service Providers(WSP's)are provided with technical, operational, skills development and management support through a public, private partnership (PPP) with The Water Academy partnership network.The aim of this service is to help to develop and maintain competencies that lead to the provision of quality and sustainable water services .

The Water Academy is a whole owned South African company staffed by engineering professionals with over 40 years experience in all sectors of the industry, experience includes plant process control and management, design and contracting and commissioning. Coupled with our engineering experience, The Water Academy is an EWSETA registered training provider and has , over the past 12 years, built the capacity in many thousands of learners throughout the country.

3. Waste water treatment: Green Drop related services: Specific focus areas

- Asset management
- Technical skills
- Compliance
- On-going monitoring, mentoring and capacity building

4. Energy efficiency: Specific focus areas

- Energy Audits
- Bench marking
- Process and design optimization
- On-going monitoring, mentoring and capacity building

This partnership service is offered in the following areas:

1. Reticulation services: Specific focus areas

- Capacity building and engineering support to reduce and manage and monitor water losses (see our course module M310)
